

Bluetooth LED Bulbs for Music & Lighting

Diamond Group, Bessemer, Ala., introduces its Bluetooth LED Bulbs, offering wireless Bluetooth speakers and lights in one convenient package. To operate, simply screw in the bulb and enjoy energy-efficient lighting and music from a laptop, tablet, smartphone or other Bluetooth-enabled device.

The Bluetooth LED Bulbs offer a 45-watt light equivalent; the device plugs into a light socket and into an electrical outlet with an adapter for power.

The product is available in two part numbers: H11001 and H11002. The H11001 is a single bulb with multi-color light options; H11002 is a white light double bulb set designed for surround sound. Both products come standard with a small remote control device that turns the lights/ speakers on and off and also dims or raises the lighting levels.

The H11002 double-bulb system can be sold in sets of two, four or eight, giving RVers a variety of options for creating lighting and stereo sound options in their RVs, according to Hu Langston, owner of the Diamond Group.

"With this product, there's no need for complicated cable connections or batteries; it's simply plug and play," he says, adding that dealers immediately recognized the value of the product at the NTP-Stag shows.

The Bluetooth LED Bulbs come with a standard two-year warranty.

What Impressed RV PRO: This two-in-one product helps fulfill the need many RVs today have for additional lighting while also offering the bonus feature of creating surround sound music. The ease of installation and use is an especially nice touch.
